AutoCAD has a very rich, extensible object model for defining and manipulating drawing objects and their attributes (geometry, dimensions, text, references, colors, etc.), enabling all kinds of application scenarios, for instance: on demand drawing updates and synchronization: objects are automatically synchronized when a revision is made to a drawing, so the user can continue working without waiting for the update to be downloaded. business process management: the drawing itself can be used as a business process modeling component, allowing, for instance, the use of BPMN2.0. AutoCAD integration with other applications A drawing can be "refreshed" (updated), "synchronized" (updated), or "rendered" (viewed). Each of these operations is a software operation and can be done individually. Once a drawing is complete (synchronized or refreshed), it can be sent to third-party applications, using different integration techniques. Some of the most common include: Autodesk Exchange (formerly Autodesk Metascape) is a set of APIs that allow third-party products to access and manipulate AutoCAD drawings, and drawings saved to the drawing Exchange repository. AutoCAD plug-ins. AutoCAD layer formats (DXF, DWF, DWT, and DGN). AutoCAD XML. AutoCAD API for Java (jXAPI). AutoCAD DXF Plug-in for Java. AutoCAD PUT (IFC) API. AutoCAD Web API. Extension mechanisms AutoCAD offers a number of ways to extend its functionality. Extensions are in the form of add-ons, plug-ins, or plug-in components. These are, in turn, code-based components that allow customization and change-over of the program's core features. Add-ons A software add-on is a separate piece of software that complements the application with some functionality. These are very popular in the CAD industry and on the CAD market. Add-ons may be executed independently, as a separate program or module, or within the AutoCAD application. AutoCAD and the other Autodesk products have a separate installer for add-ons. Plug-ins In contrast to an add-on, a plug-in is embedded within the main application's code and is not an independent program, but must be loaded before the a1d647c40b

Markup Assistant: Keep your work organized with an intelligent and fast tool that helps you keep track of all aspects of a drawing. (video: 5:01 min.) Support for Structural Analysis: Ensure that all steel connections are correctly identified and that the assembly complies with construction codes, and fully trace the load path of the assembly. More on the new version's highlights The new major release of AutoCAD provides users with many exciting improvements and features to help you enhance your productivity and efficiency. To help you understand the new capabilities in this release, we have created this white paper to give you an overview. Key new features Markup Assist Save time and work smarter with the new Markup Assist. It is a complete solution to the pain of integrating user feedback into your drawings. With just one click, incorporate feedback from printed paper and PDFs in your drawings with zero additional drawing steps. Import and export of markup Import markup or export markup for use in other software. The ability to import and export markup means that you can work with a model in AutoCAD that was drawn using another software program, then send the model back to AutoCAD for editing. Import, export, and organize your drawings Automatically mark-up AutoCAD files for archiving or exporting. Optimize and archive drawings with controlled sharing and versioning. After a drawing is edited, improved, or changed to reflect new content, automatically archive the drawings in a new folder. You can then share the folder and its contents through a shared folder, drive, or cloud-based services. With versioning, you can control access to a drawing folder or drawing set. As drawing changes are made, they are automatically archived as a new revision. Versioning can be controlled by group membership or by draw content. Review, compare, and review again with Detailed Track Changes. Compare drawings, make edits, and keep track of changes in a single integrated workspace. You can compare multiple drawings or drawings and areas with Detailed Track Changes (DTCT). Using a new approach, DTCT is similar to the track-change feature in other software, but the overall display is clearer, and you can easily switch between areas of the drawing for comparison. Markup in other drawing programs Export and send feedback to other CAD applications using the new Markup
