Here are some options: For questions and feedback, please visit the community at Steam. The Screenshifter (Screen Sifter) is a touch-based tool which allows you to convert and split images and videos into a variety of formats and sizes. It has features to choose your desired output format and split mode and scale the video to the desired size, which makes it much easier to trim or crop your footage for different sized formats. Features: Convert videos, photos, and multi-media Allows to split videos into shorter clips Split or merge files Can trim files to make them shorter or longer Split your files into smaller sizes with the same quality Split your videos to the original or other video formats Convert the video to different sizes, such as HD and standard And more... Just select the video or photo you want to convert and press the "Start" button. This tool has basic options to choose the format you want, as well as to choose if you want to convert the video to HD or not. Then, tap on the "Splitter" button to begin the process. You can then adjust the length of the files you want by moving the split point, either starting at the beginning or at the end of the video. Now, to give the video a particular aspect ratio, you have to select your desired output format. From the available formats

Screen Divider Crack Free

The screen division tool can be used to measure the distance between the lines on your screen or between objects, and to copy coordinates of lines, objects or the clipboard. Measure Divide the lines on your screen into a set of different types of measurement lines, as well as between objects. The width of the lines and objects can be specified, or the program will automatically choose a good size for the chosen measurement mode. Copy After copying the lines or objects, the coordinates of the line are displayed on the clipboard. You can paste the coordinates at another position on your screen, or use other programs for additional conversion. Scaling The screen division tool can be used to measure the distance between the lines on your screen or between objects, and to copy coordinates of lines, objects or the clipboard. Measuring Divide the lines on your screen into a set of different types of measurement lines, as well as between objects. The width of the lines and objects can be specified, or the program will automatically choose a good size for the chosen measurement mode. Copy After copying the lines or objects, the coordinates of the line are displayed on the clipboard. You can paste the coordinates at another position on your screen, or use other programs for additional conversion. General Parameters for the screen division tool include the type of lines, the scale, the magnification and the width of the lines and objects. You can also choose whether the tool's size changes when you zoom in or out. License: Free and Open Source Developer: Mikolaj Sosnowski Disclaimer: This application is 100% free and open source.
