PassLook is a small software application designed specifically for helping you store passwords for your online accounts and protect the sensitive information with the aid of master password. The advantages of being portable Since this is a portable program, it is important to mention that it doesn't leave any traces in the Windows Registry. You can copy it on any USB flash drive or other devices, and take it with you whenever you need to save passwords on the breeze, without having to go through installation steps. Minimalistic looks You are welcomed by a clean feature lineup that embeds only a few dedicated parameters to tinker with. Everything is kept as simple and clear as possible, so even less experienced users can easily discover and tweak the program's functions. Storing a new password PassLook gives you the possibility to add a new password by providing details about the website, user name, password, user-defined notes, as well as the URL that needs to be launched. What's more, you are allowed to perform search operations, edit or delete the current entry, show or hide the characters of the password between asterisks, and copy the password to the clipboard, so you can paste it into other third-party tools. Other notable characteristics worth being mentioned offer you the possibility to reveal all passwords in a list, copy all passwords to the clipboard in an alphabetical order, use hotkeys for a better control over the entire process, as well as set up a master password from preventing unauthorized users from stealing sensitive data. Bottom line All in all, PassLook offers a simple software solution when it comes to helping you store passwords for your online accounts in a password-protected database.

Dietary fat and calcium intake of Canadian women of childbearing age. Data collected by the Dietary Risk-factor and Nutrition Survey (DRNS) and by the Dietary Assessment Tool (DAT) from a cross-sectional sample of 2970 women were used to estimate the total intakes of fat and calcium from food sources, foods and dietary supplements (DSs) and calcium from food and DS. Food and DS sources of fat and calcium were estimated using the Diet History Questionnaire (DHQ), and foods using the Block Children's Eating Pattern Measure (BCEPM). Calcium intakes from food and supplements estimated from the DHQ, BCEPM and DAT were above Canadian Dietary Reference Intakes (DRIs) by almost 3, 1 and 1 mg/d for milk, cheese and yogurt, respectively

Word2vec is an approach to unsupervised machine learning of word representations. It can be used for text categorization and classification, question answering, information retrieval, and language modeling. Word2vec can also learn from unlabeled text and generate concepts that are relevant to texts. The results of Word2vec models can be used for sentiment analysis, topic models, and sentiment lexicons. Topic models are models which assign a "topic" to a text, representing words in the text using the topics. For instance, if a person talks about a bicycle in his posts, the word bicycle in the post would represent a topic. Technology: What is it? A simple process used for generating high-dimensional word vectors. These vectors are called GloVe vectors and are trained on web-based news articles. The basic idea is that if two words in a given article are mentioned in the same sentences, then there is a high chance that they will be similar, or have some correlation. The same process also works for other textual data. What are the goals of this? This will help the developers to understand the topic of a particular text/set of text. From here the developer can use this for any kind of text classification/sentiment analysis/topic modeling etc.

3. Tensorflow 2.0 The new version of Tensorflow 2.0 is completely rewritten from scratch and has introduced new architectures that aim to improve efficiency and performance. The Tensorflow team has decided to move away from previous tools like Caffe and CUDA as they were not designed for scale and speed. Technology: Tensorflow is a free, open source software library for machine learning, used to build computer

vision models, NLP models, generative models, and reinforcement learning algorithms. This library helps machine learning and data science researchers and developers to build, train, and deploy end-to-end models for applications that work at scale on heterogeneous systems. 4. Kaveware Content Classifier SDK Kaveware Content Classifier SDK is a powerful, open-source machine learning based digital content (images/videos/text) classification framework. It includes pre-trained image and video models (based on ImageNet, GoogleNet, and VGG) and text classifiers (based on VGG, Glove, Word2Vec, FastText, etc.) and is capable of detecting text, images, and video objects on one end. This is done by using the image and video object detection models, which are trained on ImageNet and YouTube. The SDK comes with a set of easy to use APIs that you can integrate with your applications, allowing you to easily build your own intelligent content classifiers and be in the lead in your industry. The code is completely open-source, written in both C++ and Java, with a
