The following information summarizes some of the basic features and functions of AutoCAD. While AutoCAD contains an extremely robust feature set, it is also accessible to beginners. AutoCAD's ribbon user interface provides a clean, simple, consistent, and easy-to-use user interface.

Ribbon Features With the ribbon, users access and work with several tools. Selecting tools are located at the top of the ribbon. These tools include the pen tool, dimension tool, snapping tool, selection tool, and the shape builder tool. The ribbon is implemented with horizontal and vertical tabs that can be moved to positions along the edge of the screen. These tabs enable users to quickly access the tools in the ribbon by clicking on the tab location. The ribbon has been designed to allow users to choose the tool in use when it is clicked. Raster image and bitmap data is stored in a file in AutoCAD as either a raster image (for grayscale, RGB, and CMYK images) or a bitmap (for indexed color images). Raster images are suitable for drafting-level drawings. Vector graphics is typically a combination of a collection of different geometric primitives: polylines (straight lines), polycurves (curves that are based on straight lines), arcs, splines, vectors, bezier curves, and so on. It can also be a combination of polylines, polycurves, arcs, and splines. Multiline text, or text and typefaces, is often used for documenting design and functional information, for example, creating the title for a project drawing. Text is primarily laid out by blocks of text (paragraphs) and can also be set to alignment (justification). The text can also be part of a table or can be included in a graph.
